

# IMGD 1001 - The Game Development Process: A Theory Of Fun

by

**Robert W. Lindeman** (gogo@wpi.edu)

**Kent Quirk** ([kent\\_quirk@cognitoy.com](mailto:kent_quirk@cognitoy.com))

(major credits to Raph Koster)

Lindeman & Quirk (& Claypool) - WPI Dept. of Computer Science

## A Theory of Fun

- Excellent book by Raph Koster
  - ♦ Designer of *Star Wars Galaxies*, and one of the better speakers at Game Developer's Conference
- Good blog, too: [www.raphkoster.com](http://www.raphkoster.com)

Lindeman & Quirk (& Claypool) - WPI Dept. of Computer Science

2

## People are pattern-matching machines

- See the face?
- Once you see it, you can't help seeing it after that

Lindeman & Quirk (& Claypool) - WPI Dept. of Computer Science

3

## People are pattern-matching machines

- We see faces even in the most boring images
- We might even see expressions

; -)

Lindeman & Quirk (& Claypool) - WPI Dept. of Computer Science

4

## Noise == boredom

- We try to find a pattern for a little while, then give up.
- Remember Shannon's information theory?
- Randomness == incompressible

Lindeman & Quirk (& Claypool) - WPI Dept. of Computer Science

5

## The Converse:

- Information == compressible
- "Chunking"
- Wrapping things at higher levels so as to improve perception and recognition
- Ex: Chess

Lindeman & Quirk (& Claypool) - WPI Dept. of Computer Science

6

## Chunking: "Muscle Memory"

- Your muscles don't have memory
- But your brain does (duh)
- You train your nervous system to react in ways that no longer require your forebrain to interact
  - ♦ Swing of a baseball bat
  - ♦ Driving a car
  - ♦ Playing...video games!

Lindeman & Quirk (& Claypool) - WPI Dept. of Computer Science

7

## Pattern matching is interesting

- We like to find and identify patterns
- Bejeweled
  - ♦ Takes it even further -- gives us the ability to impose patterns

Lindeman & Quirk (& Claypool) - WPI Dept. of Computer Science

8

## Pattern matching is fun

---

- Casual games
  - ♦ Find the key to the game
  - ♦ Learn the skills
    - And all the powerups for different levels
  - ♦ Let's look at one
    - [addictinggames.com](http://addictinggames.com)
      - ♦ Bloons

## Pattern matching is fun

---

- It goes to all levels
- RTS:
  - ♦ Fun to learn to use the pieces
  - ♦ Fun to learn to find a strategy to beat each opponent / level
  - ♦ Fun to learn the metastrategy about how the pieces are organized
  - ♦ Fun to figure out where your friends have strengths and weaknesses
- Fun to find the next game to play

## Games are puzzles

- “They are about cognition and learning to analyze. When you’re playing a game, you’ll only play it until you master the pattern. Once you master it, the game becomes boring.”
  - ♦ -- Raph Koster

## Players seek to optimize

- If people see an optimal path, they’ll take it.
- Sometimes at the expense of gameplay
- We have names for that:
  - ♦ Cheat, hack, exploit, macro...

## It's what humans do

---

- "Clubbing baby seals"
- You can fight it
  - ♦ Tighten up the rules
  - ♦ Make exploits harder
  - ♦ People (sometimes) hate it when they're arbitrary
- Make the game systems better
  - ♦ Take away the advantage
  - ♦ Clubbing beginners won't happen if there's no advantage to it

## Where is the boundary?

---

- The letter of the rule?
- Or the intent?
  - ♦ Ask
- Sometimes new games are invented by breaking or changing the rules!
  - ♦ Rugby -> Football
  - ♦ Most of poker

## Game design: a losing battle

---

- Humans act to make their games boring
- It's in our very genes
- It's actually what makes them fun in the first place!

## It's why we have human competition

---

- People provide much more subtle opportunities for puzzles

## Game design

---

- The problem of providing a great possibility space for our players to explore
- But if the designer tries to conceive of the whole thing in advance...
- ...players won't be far behind.
