

Funding a Project

- Projects that are part of a grant likely have external funds that can be used to support the project. See your advisor about this possibility.
- For project costs (e.g., user study remuneration, PC peripherals, software), students are expected to absorb costs of about a "textbook" each (\$50), per term. For example, a 3-person MQP team might be expected to spend up to \$150 each (total \$450) for the project.
- For project costs beyond this, the department can provide support. Currently, this is about \$100/student total. For CS students, see the CS MQP Team Budgeting document for details.
- For costs beyond that, CS students can fill out a Funding Request that provides a (very) distant option to provide additional funding (again, no guarantees). *Important!* Such a request should be filled out only *after* spending the above money.
- For financial help beyond this, including financial concerns, food insecurity, emergency financial Assistance and special circumstances, the Dean of Students Office can provide help.
