

Plan Dependency Graph for Rainfall

1. What is the initial format/structure of the input data?

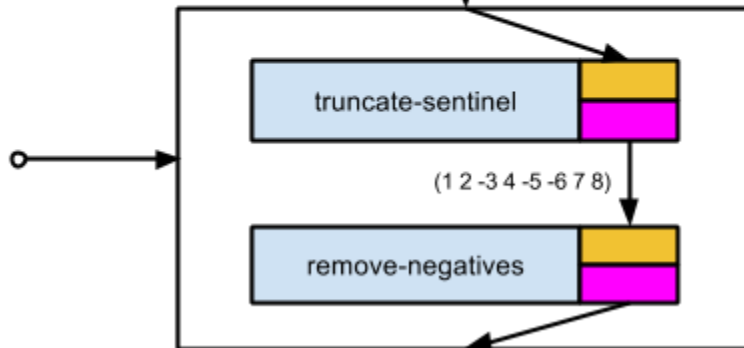

(1 2 -3 4 -5 -6 7 8 -999 10 11)

2. Is there a different version of this data (contents or format) that seems easier, or more useful, for this problem?

3. What tasks would you need to do to convert the original input to the more useful format?

4. Do these tasks have to occur in a particular order?

5. What output should the overall function produce on your example?

6. Identify the tasks that you'd need to do to convert the useful data into the overall output.
