Student Presentation: Mobile Technologies
Talk: Mobile Technology

- GROUP to research, master and present on any TWO mobile technologies.
- Overarching goal is to explore new/emerging topics in fast-changing mobile world
- Your talk should cover:
  - Background on the technology (tell a story about its history, etc)
  - Specific problems it's designed to solve
  - Typical example use case: When is it typically used?
  - Real world examples of where it is being used. E.g. by XYZ company for ABC
  - Overview of how it works?
  - Code snippet: Walk through a simple program that uses the technology including how to compile it and how to run it.
Talk on Mobile Technology

- Submit talk slides + working code
- To avoid duplicate presentations, each group email me their TWO topics by October 28, 2019
- This talk is 15% of your grade!
- The idea is to become expert, help any groups that need your help on that technology
Example Topics on Mobile Technology

- Mobile programming/development:
  - Kotlin
  - iPhone development
  - 3rd part libraries: E.g. Xamarin
  - Mobile web programming
  - PhoneGap
  - AppInventor
  - Mobile game development tools: Unity,

- Machine/Deep Learning:
  - Deep Learning/machine learning in Android: Tensorflow, etc
  - Mobile machine/deep learning support in MATLAB
  - Keras support for Android Deep learning
  - Neural Networks API (NNAPI)
Talk on Mobile Technology

- More Google APIs (that could be used by mobile devices):
  - Analytics
  - Google Drive
  - Google Fit
  - Google Cast
  - Advertising: E.g. Adwords, Admobs

- More Android APIs:
  - Firebase (database, messaging, authentication, analytics, etc)
  - Speaking to Android (Speech recognition, Voice Actions)
  - Renderscript
  - Media Recorder
  - Wireless Communication: Bluetooth, WiFi, NFC, etc
  - Android Pay
  - Telephone/SMS
  - Nearby Connections API
  - Depth Sensing: Project Tango
  - Augmented Reality: ARtoolkit, vuforia, EasyAR
Talk on Mobile Technology

- MobiLoud: Turn Wordpress site into Native Mobile app
- Nativescript, Sencha: Use web technologies to develop mobile apps
- Onsen UI: Nice set of UI components
- Fliplet: Minimal coding framework
- Appsheet, Quick base: zero coding framework
- BuildFire: Zero coding, drag and drop
- ML kit
Final Project Proposal
Final Project Proposal

- While working on projects 3 & 4, also brainstorm on final project
- Oct 28, Propose mobile/ubicomp app, solves WPI problem or Machine learning
- **General problem:** Design and develop an Android app that solves helps WPI students cope with or manage the COVID situation.
  - Apps uses mobile or ubiquitous computing components (e.g. location, sensors or camera)
  - Projects difficulty will be graded based on the difficulty points sheet
  - If games, must gamify solution to real world problem

- Proposals should include:
  1. **Problem you intend to work on**
     - App that finds available study spaces (safe + available), dynamically updated
  2. **Why this problem is important**
     - E.g. 32% of WPI students living with roommates, hard to find places to study
3. **Related Work**: What prior solutions have been proposed for this problem

4. **Summary of envisioned mobile app (?) solution**
   - E.g. Mobile app maintains dynamic list of available and safe study spots including Android/third party modules app will have

- Can bounce ideas of me (email, or in person)
- Can change idea any time
- **Reminder: 1 slide due today**
Final Project Proposal

- Can also do Machine learning project that classifies/detects analyzes a dataset of builds a real-time app to classify some human sensor data. E.g. Classifies
  - A speaker's voice to determine if nervous, sad, etc
  - A user’s accelerometer data and recognizes their walk from 5-10 other people
  - A picture of a person's face and determines their mood
  - Data from a person's phone to measure their sleep duration or/and quality
  - Video of a person’s face to detects their heart rate
  - A person's communication/phone usage patterns to detect their mood
- Can use existing smartphone datasets online
- See project difficulty points rubric
- Also propose evaluation plan
  - E.g. Small user study to evaluate app.
  - Can trade with another team: you review our app, we review yours
  - Machine learning performance metrics (e.g. classification accuracy, cross validation, etc)
- Can bounce ideas off me (email, or in person)
- Can change idea any time
Rubric: Grading Considerations

- **Problem (10/100)**
  - How much is the problem a real problem (e.g. not contrived)
  - Is this really a good problem that is a good fit to solve with mobile/ubiquitous computing? (e.g. are there better approaches?)
  - How useful would it be if this problem is solved?
  - What is the potential impact on the community (e.g. WPI students) (e.g. how much money? Time? Productivity.. Would be saved?)
  - What is the evidence of the importance? (E.g. quote a statistic)

- **Related Work (10/100)**
  - What else as been done to solve this problem previously

- **Proposed Solution/Classification (10/100)**
  - How good/clever/interesting is the solution?
  - How sophisticated and how are the mobile/ubiquitous computing components (high level) used? (e.g. location, geofencing, activity recognition, face recognition, machine learning, etc)
Rubric: Grading Considerations

- **Implementation Plan + Timeline (10/100)**
  - Clear plans to realize your design/methodology
  - Android modules/3rd party software used
  - Software architecture,
  - Screenshots (or sketches of UI), or study design + timeline

- **Evaluation Plan (10/100)**
  - How will you evaluate your project, metrics
  - E.g. small user studies for apps
  - Machine learning cross validation, etc

- 50 more points allotted for your slides + oral presentation
Final Project: Proposal Vs Final Submission
(Presentation + Paper)
Final Project Proposal Vs Final Submission

- Introduction
- Related Work
- Approach/methodology
- Implementation
- Project timeline

- Evaluation/Results
- Discussion
- Conclusion
- Future Work

Note: No timeline
In final paper
The Rest of the Class
The Rest of this class

- **Part 1: Course and Android Introduction**
  - Introduce mobile computing, ubiquitous Computing, Android,
  - Basics of Android programming, UI, Android Lifecycle

- **Part 2: Mobile and ubicomp Android programming**
  - mobile Android components (location, Google Places, maps, geofencing)
  - Ubicomp Android components (camera, face detection, etc)

- **Part 3: Mobile Computing/Ubicomp Research**
  - Machine learning (classification) in ubicomp
  - Ubicomp research (smartphone sensing examples, activity recognition, human mood detection, etc) using machine learning
  - Mobile computing research (app usage studies, energy consumption, etc)

Next!!
Introduction to Activity Recognition
Activity Recognition

- **Goal:** Want our app to detect what activity the user is doing?
- **Classification task:** which of these 6 activities is user doing?
  - Walking,
  - Jogging,
  - Ascending stairs,
  - Descending stairs,
  - Sitting,
  - Standing

- Typically, use machine learning classifiers to classify user’s accelerometer signals
Activity Recognition Overview

Gather Accelerometer data

Machine Learning Classifier

- Walking
- Running
- Climbing Stairs

Classify Accelerometer data
Example Accelerometer Data for Activities

(a) Walking

(b) Jogging

(e) Sitting

(f) Standing
Example Accelerometer Data for Activities

(c) Ascending Stairs

(d) Descending Stairs
Applications of Activity Recognition
Applications of Activity Recognition (AR)
Ref: Lockhart et al, Applications of Mobile Activity recognition

- **Fitness Tracking:**
  - **Initially:**
    - Physical activity type,
    - Distance travelled,
    - Calories burned
  - **Newer features:**
    - Stairs climbed,
    - Physical activity (duration + intensity)
    - Activity type logging + context e.g. Ran 0.54 miles/hr faster during morning runs
    - Sleep tracking
    - Activity history

*Note: AR refers to algorithm But could run on a range of devices (smartphones, wearables, e.g. fitbit)*
Applications of Activity Recognition (AR)
Ref: Lockhart et al, Applications of Mobile Activity recognition

- **Health monitoring:** How well is patient performing activity?
- Make clinical monitoring pervasive, continuous, real world!!
  - Gather context information (e.g. what makes condition worse/better?)
  - E.g. timed up and go test
- Show patient contexts that worsen condition => Change behavior
  - E.g. walking in narrow hallways worsens gait freeze

Question: What data would you need to build PD gait classifier? From what types of subjects?
Parkinsons disease
Gait freezing
COPD, Walk tests in the wild
Applications of Activity Recognition

Ref: Lockhart et al, Applications of Mobile Activity recognition

- **Fall**: Leading cause of death for seniors
- **Fall detection**: Smartphone/watch, wearable detects senior who has fallen, alert family
  - Text message, email, call relative

Fall detection + prediction
Applications of Activity Recognition (AR)
Ref: Lockhart et al, Applications of Mobile Activity recognition

- **Context-Aware Behavior:**
  - In-meeting? => Phone switches to silent mode
  - Exercising? => Play song from playlist, use larger font sizes for text
  - Arrived at work? => download email

- Study found that messages delivered when transitioning between activities better received

- **Adaptive Systems to Improve User Experience:**
  - Walking, running, riding bike? => Turn off Bluetooth, WiFi (save power)
  - Can increase battery life up to 5x
Applications of AR

Ref: Lockhart et al, Applications of Mobile Activity recognition

- Smart home:
  - Determine what activities people in the home are doing,
    - Why? Infer illness, wellness, patterns, intrusion (security), etc
    - E.g. TV automatically turns on at about when you usually lie on the couch
Applications of AR: 3rd Party Apps
Ref: Lockhart et al, Applications of Mobile Activity recognition

- **Targeted Advertising:**
  - AR helps deliver more relevant ads
  - E.g user runs a lot => Get exercise clothing ads
  - Goes to pizza places often + sits there => Get pizza ads
Applications of AR: 3rd Party Apps
Ref: Lockhart et al, Applications of Mobile Activity recognition

- **Research Platforms for Data Collection:**
  - E.g. public health officials want to know how much time various people (e.g. students) spend sleeping, walking, exercising, etc
  - Mobile AR: inexpensive, automated data collection
  - E.g. Stanford Inequality project: Analyzed physical activity of 700k users in 111 countries using smartphone AR data
Applications of AR: 3rd Party Apps
Ref: Lockhart et al, Applications of Mobile Activity recognition

- **Track, manage staff on-demand:**
  - E.g. at hospital, determine “availability of nurses”, assign them to new jobs/patients/surgeries/cases
Applications of AR: Social Networking
Ref: Lockhart et al, Applications of Mobile Activity recognition

- **Activity-Based Social Networking:**
  - Automatically connect users who do same activities + live close together
Applications of AR: Social Networking
Ref: Lockhart et al, Applications of Mobile Activity recognition

- **Activity-Based Place Tagging:**
  - Automatically “popular” places where users perform same activity
  - E.g. Park street is popular for runners (activity-based maps)

- **Automatic Status updates:**
  - E.g. Bob is sleeping
  - Tracy is jogging along Broadway with track team
  - Privacy/security concerns => Different Levels of details for different friends
Activity Recognition Using Google API
Activity Recognition

- Activity Recognition? Detect what user is doing?
  - Part of user’s context
- Examples: sitting, running, driving, walking
- Why? App can adapt it’s behavior based on user behavior
- **E.g.** If user is driving, don’t send notifications

https://www.youtube.com/watch?v=S8sugXgUVEI
Google Activity Recognition API

- API to detect smartphone user’s current activity
- Programmable, can be used by your Android app
- Currently detects 8 states:
  - In vehicle
  - On Bicycle
  - On Foot
  - Running
  - Walking
  - Still
  - Tilting
  - Unknown
Google Activity Recognition API

- Deployed as part of Google Play Services
Android Activity Recognition: Some Updates
Activity Recognition

- Older way: ActivityRecognitionApi deprecated
- Code sample in Android studio implements this unfortunately
- Typically used along with GoogleApiClient

```java
new GoogleApiClient.Builder(context)
    .addApi(ActivityRecognition.API)
    .addConnectionCallbacks(this)
    .addOnConnectionFailedListener(this)
    .build()
```
Activity Recognition

- **New Way:** ActivityRecognitionClient
- **Provides 2 APIs**
  - Activity Recognition Transition API: notifies when user's activity has changed!
    - Saves battery power
    - E.g. User was in car. Detect when user has exits the car
  - Activity Recognition Sampling API:
    - Can sample user's current activity at higher frequency
    - Can request periodic user activity updates using requestActivityUpdates(long, PendingIntent)

- Either API is fine as long as it works
- Probably best to use this version if you want your code to work in future
Activity Recognition

- Official Google documentation with example

- Good reference articles with good examples, gentle walkthrough:
Android Awareness API
Awareness API
https://developers.google.com/awareness/overview

- Single Android API for context awareness released in 2016
- Combines some APIs already covered (Place, Activity, Location)

<table>
<thead>
<tr>
<th>Context type</th>
<th>Example</th>
</tr>
</thead>
<tbody>
<tr>
<td>Time</td>
<td>Current local time</td>
</tr>
<tr>
<td>Location</td>
<td>Latitude and longitude</td>
</tr>
<tr>
<td>Place</td>
<td>Place, including place type</td>
</tr>
<tr>
<td>Activity</td>
<td>Detected user activity (walking, running, biking)</td>
</tr>
<tr>
<td>Beacons</td>
<td>Nearby beacons matching the specified namespace</td>
</tr>
<tr>
<td>Headphones</td>
<td>Are headphones plugged in?</td>
</tr>
<tr>
<td>Weather</td>
<td>Current weather conditions</td>
</tr>
</tbody>
</table>
Awareness API

● **Snapshot API:**
  ● Return cached values (Nearby Places, weather, Activity, etc)
  ● System caches values
  ● Optimized for battery and power consumption

● **Fences API:**
  ● Used to set conditions to trigger events
  ● E.g. if(user enters a geoFence & Activity = running) notify my app

● **Official Android Awareness API has good examples:**
  ● [https://developers.google.com/awareness](https://developers.google.com/awareness)
