Interactive Media and Game Development

Introduction

Outline

• What is a Game?
• Genres
• The Game Industry
• Game Timeline
• Development Teams
What is a Game? (1 of 3)

• Movie? (ask: why not?)
  → no interaction, outcome fixed

• Toy? (has interaction ... ask: why not?)
  → no goal, but still fun (players can develop own goals)

• Puzzle? (has goal + interaction ... ask: why not?)
  → strategy and outcome is the same each time

"A computer game is a software program in which one or more players make decisions through the control of game objects and resources, in pursuit of a goal."

What is a Game (2 of 3)

• A Computer Game is a Software Program
  - Not a board game or sports
  - Consider: chess vs. soccer vs. Warcraft
    * Ask: What do you lose? What do you gain?
    - Lose: 1) physical pieces, 2) social interaction
    - Gain: 1) real-time, 2) more immersive, 3) more complexity

• A Computer Game involves Players
  - "No, Duh". But stress because think about audience. The game is not for you but for them.
  - Don’t just think about your story or the graphics or the interface, but consider the players.
  - Ex: complicated flight simulator (say, you are a flying geek) but audience is beginner
What is a Game (3 of 3)

• Playing a Game is About Making Decisions
  - Ex: what weapon to use, what resource to build
  - Can be frustrating if decision does not matter
  - Want good gameplay (major topic later)

• Playing a Game is About Control
  - Player wants to impact outcome
  - Uncontrolled sequences can still happen, but should be sparing and make logical
  - Ex: Riven uses train system between worlds

• A Game Needs a Goal
  - Ex: Defeat Ganandorf in Zelda
  - Long games may have sub-goals
  - Ex: recover Triforce first, then Sword of Power
  - Without game goals, a player develops his/her own (a toy)

Based on notes from Mark Overmars

What a Game is Not (1 of 2)

• A bunch of cool features
  - Necessary, but not sufficient
  - May even detract, if not careful, by concentrating on features not game

• A lot of fancy graphics
  - Games need graphics just as hit movie needs special effect ... but neither will save weak idea
  - Again, may detract
  - Game must work without fancy graphics
  - Suggestion: should be fun with simple objects

“When a designer is asked how his game is going to make a difference, I hope he ... talks about gameplay, fun and creativity – as opposed to an answer that simply focuses on how good it looks” – Sid Meier (Civilizations, Railroad Tycoon, Pirates)

Based on notes from Mark Overmars
What a Game is Not (2 of 2)

• A series of puzzles
  - All games have them
  - But not gameplay in themselves
  - Puzzles are specific, game systems spawn more generic problems

• An intriguing story
  - Good story encourages immersion
  - But will mean nothing without gameplay
  - Example: Baldur's Gate, linear story. Going wrong way gets you killed. But not interactive. Interaction in world all leads to same end.

Games are Not Everything

• Most important ... is it fun, compelling, engaging?
  - And these come from a superset of games

• Computers are good at interactivity
  - Allow for interactive fun
  - Interactive Media and Game Development

• Examples:
  - SimCity - very compelling, but mostly no goals. More of toy than a game, but still fun.
  - Grim Fandango - good visuals, story, etc. But need to do puzzles to proceed. Could have skipped to just watch story. Would still have been fun without the gameplay.
Outline

• What is a Game?
• Genres (next)
• The Game Industry
• Game Timeline
• Team Sizes

Game Types

• What are some types of games?
• Provide examples
• What separates them from others?
Arcade Games

• Reaction speed are the most important aspect of the game
  - Examples: scrolling shooters, maze games like Pacman, paddle games like Breakout, Pong
• Relatively easy to make
• Normally 2-d graphics
• Good starting point for first game

Puzzle Games

• Clever thinking is the most important aspect
• Ex: Many maze games are actually more based on puzzle solving rather than on reaction speed
• Other examples include board games and sliding puzzles
• Normally 2-dimensional
• Relatively easy to create
  - Except when played against a computer opponent
  - Artificial Intelligence can be harder
    * Ex: How to program the computer to play chess?

Based on notes from Mark Overmars
Role Playing Games

- Steer a character through a difficult world
  - Examples are Diablo and Baldur’s Gate
- Development of character to learn new skills, becoming more powerful, and finding additional and better weapons
- Opponents become more powerful as well
- Can create 2-d or 3-d
- Generally harder to make because must create the mechanism of character development
- Also normally need large world
- Good level design is crucial

Based on notes from Mark Overmars

Strategy Games

- Real-time (RTS) or turn-based
- Player only indirectly controls the character
  - Tactics less important than Strategy
- Examples include Age of Empires, Warcraft III...
  - Also, usually “God Games”, such as B&W
- Generally take a lot of time to create
  - Require many different game objects, each with animated images and specific behavior

Based on notes from Mark Overmars
Adventure Games

• Game is about adventure and exploration
  - Story line is often crucial
• Can be 2-d or 3-d
• Actions easy (just move)
• Difficulty is in making exploration/adventure interesting
  - Interesting, funny, and surprising story line
  - Corresponding artwork
• Artists' role crucial

First-Person Shooters

• 3-d version of many arcade-style games (move and shoot)
• Emphasis is on fast-paced action and reaction speed, not on cleverness and puzzle solving
• Many examples: Doom, Quake, ...
• Need to be 3-d
• Relatively difficult to create because of models

Based on notes from Mark Overmars
Third-Person Action

• Player directly controls a game character (avatar) through a hostile world
  - Ex: Tomb Raider
• Often, not much emphasis on character development
• Fast action and discovering the game world
• Some have story line, other adventure game aspects
• Can be 2-d or 3-d
• Can sometimes be created easily

Sports Games

• Real-life sport, made virtual
• Ideas, rules in place
• Making realistic, challenging, fun like sport can be difficult
Racing Games

- Really, special type of sport game
  - But pervasive enough to get own category
- Drive a vehicle, as fast as possible or sometimes for exploration or combat
- Either realistic (ex: Formula 1) or focused on fun aspects (Midtown Madness)
- Both 2-d or 3-d

Simulators

- Try for realistic representation
  - Ex: flight simulators, Trainz
- Other simulations include world simulation
  - Ex: simCity or simEarth
- Relatively difficult to create since getting details right a challenge
Party Games

• Variety of types
  - Ex: Mario Party, DDR, Karaoke
• Social aspects important with participants in the same space
• Allow for rapid change of turns
• Allow for disparate abilities (beginners and experts, both have fun)

Educational Games

• Games are great at teaching ... how to play the game!
• Educational games are designed to teach player knowledge or skill that is valuable outside the game
  - Ex: math, reading, problem solving
Outline

• What is a Game?
• Genres
• The Game Industry (next)
• Game Timeline
• Team Sizes

The Game Industry

• 60% of all Americans play video games
  - In 2000, 35% of Americans rated playing computer and video games as the most fun entertainment activity for the third consecutive year
• Computer/video game industry on par with box office sales of the movie industry
  - $6.35B/year for U.S. Sales in 2001
• Development
  - Costs $3M to $10M to develop average game
  - Takes 12-24 months
Hit-Driven, Entertainment Business

- Entertainment, not packaged goods
  - Consumers say, “I have to have the next WarCraft game from Blizzard!”
  - No one says, “I have to have that next razor blade from Gillette!”
  - Games generate
    * emotional responses - fulfill fantasies
    * escape from reality - stimulate the senses
- Causes of success are intangible
  - Consumers are smarter than often thought
  - “Quality is king”
  - Hits are made by:
    - those who are: creative, instinctive, and who know what a great gaming experience feels like
    - not by marketing executives

What Games are Played?

- Console game players:
  - Action (30%), sports (20%), racing (15%), RPG (10%), fighting (5%), family entertainment (5%), and shooters (5%)
- Computer gamer players:
  - Strategy (30%), children's entertainment (15%), shooters (15%), family entertainment titles (10%), RPG (10%), sports (5%), racing (5%), adventure (5%), and simulation (5%)
What about Online Games?

- Not just for PC gamers anymore
- 24% of revenues will come from online by 2010 (Forrester Research)
- Video gamers
  - 78% have access to the Internet
  - 44% play games online
  - Spend 12.8 hours online per week
  - Spend 6.5 hours playing games online

Game Studios - Vertical Structure

- Developers
- Publishers
- (Distributors)
- Retailers
- Much like a mini-Hollywood
Developers

- **Design and implement games**
  - Including: programming, art, sound effects, and music
  - Historically, small groups
  - Analogous to book authors
- **Structure varies**
  - May exist as part of a Publisher
  - May be “full-service” developers or may outsource some
    - Motion Capture (to replicate realistic movement)
    - Art and Animation (can be done by art house/studio)
- **Many started on PC games (console development harder to break into)**
- **Typically work for royalties & funded by advances**
  - Do not have the capital, distribution channels, or marketing resources to publish their games
  - Often seen that developers don’t get equitable share of profits
  - Can be unstable

Publishers

- **Fund development of games**
  - Including: manufacturing, marketing/PR, distribution, and customer support
- **Publishers assume most of the risk, but they also take most of the profits**
- **Relationship to developers**
  - Star Developers can often bully Publishers, because publishers are desperate for content
  - Most Developers are at the mercy of the almighty Publisher (details on relationship in Chapter 7.3, done later)
- **Originally grew out of developers**
- **Massive consolidation in recent years**
- **Most also develop games in-house**
Retailers

- **Sell software**
- Started with mail-order and computer specialty stores
- Shift in 80's to game specialty stores, especially chains (Today 25%)
  - EB Games, GameStop
- Shift in 90's to mass market retailers (Today 70%) (ask)
  - Target, WalMart, Best Buy
- Retailers generally earn 30% margin on a $50 game
- Electronic download of games via Internet still in infancy
  - Big but not huge (Today 5%)

Outline

- What is a Game?
- Genres
- The Game Industry
- Game Timeline (next)
- Team Sizes
Game Development Timeline (1 of 5)

• Inspiration
  - getting the global idea of the game
  - duration: 1 month (for a professional game)
  - people: lead designer
  - result: treatment document, decision to continue

• Conceptualization
  - preparing the "complete" design of the game
  - duration: 3 months
  - people: designer + prototype programmers/artists
  - result: complete design document
  - (continued next slide)

Concept

- Define game concept
- Define core game features
- Find/Assign developer
- Estimate budget & Due date

Based on notes from Mark Overmars

Based on notes from Neal Robison, ATI
Concept: Van Helsing (3 of 4)

(Van Helsing Pre-Production)

Concept: Van Helsing (4 of 4)

(Van Helsing Finished Concept)
Game Development Timeline (2 of 5)

• Prototypes
  - Build prototypes as proof of concept
    • Can take 2-3 months (or more)
    • Typically done a few months in
  - In particular, use to test game play
  - Throw prototype away afterwards
    • Don’t expect it to evolve into game!
  - Pitch to Publisher
• (Continued next slide)

Prototype or 1st Playable

- Game Design Document & Technical Design Document
  - "The Bibles"
- Production budget & detailed schedule
- Working prototype, with game mechanics
- Focus test
- Submit concept to Sony, etc. Part of "pitch process", next)
The Pitch Process: Presentation

• Key pitch presentation content:
  - Concept overview & genre profile
  - Unique selling points
    * What makes it stand out from its competitors
  - Proposed technology & target platform/s
  - Team biographies & heritage
  - Outline marketing information, including potential licensing opportunities

The Pitch Process: Prototype

• Key game prototype features:
  - Core gameplay mechanic
  - Game engine / technological proficiency
  - Artistic / styling guide
  - Demonstration of control / camera system
  - Example gameplay goals
The Pitch Process: Project Schedule & Budget

• Schedule & budget must:
  - Be detailed and transparent
  - Allow for contingency scenarios
  - Have several sets of outcomes for different size publishers
  - Be realistic

The Deal: Research

• The stress was Publishers screening Developers
• But points Developers should also research prospective Publishers:
  - Are they financially stable?
  - Do they have global reach?
  - Do they market / PR their games well?
  - Is there a history of non-payment of milestones or royalties?
  - Have they produced many titles?
The Deal: IP Rights

- Intellectual Property Rights include:
  - Game name
  - Logos
  - Unique game mechanics & storyline
  - Unique characters, objects & settings
  - Game Source Code including artwork & associated assets
  - Unique sounds and music

The Deal: Payment Negotiation (1 of 2)

- Current approximate development costs:
  - $4-5 million for AAA multi-platform
  - $2-3 million for AAA PlayStation 2 only
  - $1 million for A-quality single platform

- Royalties
  - Percentage payments of profits made after recoup of development costs
  - Developer royalties range 0% ("work for hire") to 40%

- Other considerations:
  - Rising-rate royalty, increasing percentage the more units sell
  - Clear royalty definition of ‘wholesale price’ (i.e. including cost of goods etc.)
  - Right to audit publishers books
  - Currency/exchange rate/VAT figures
Moving Projects Forward

- Most Publishers have a “Greenlight Process”
  - Use to determine which projects go forward
- Developers submit to committee at five, mostly independent stages:
  - Concept
  - Assessment
  - Prototype
  - First Playable
  - Alpha
- At each stage, committee reviews:
  - Decides whether or not to continue funding
    - Developers then get next “lump” of money
  - Evaluates market potential
  - Adjusts unit forecasts accordingly
Prototype: Red Ninja (2 of 3)

(Red Ninja
Pre-
Production)

Prototype: Red Ninja (3 of 3)

(Red Ninja
Final
Production)

Based on notes from Neal Robison, ATI
Game Development Timeline (3 of 5)

• Blueprint
  - separate the project into different tiers
  - duration: 2 months
  - people: lead designer, software planner
  - result: several mini-specifications

• Architecture
  - creating a technical design that specifies tools and technology used
  - duration: 2 months
  - people: project leader, software planner, lead architect
  - result: full technical specification

Game Development Timeline (4 of 5)

• Tool building
  - create a number of (preferably reusable) tools, like 3D graphics engine, level builder, or unit builder
  - duration: 4 months
  - people: project leader and 4 (tool) programmers
  - result: set of functionally tools (maybe not yet feature complete)

• Assembly
  - create the game based on the design document using the tools; update design document and tools as required (consulting the lead designer)
  - duration: 12 months
  - people: project leader, 4 programmers, 4 artists
  - result: the complete game software and toolset
Other Development Milestones: Alpha Definition

- At Alpha stage, a game should:
  - Have all of the required features of the design implemented, but not necessarily working correctly
  - Be tested thoroughly by QA to eliminate any critical gameplay flaws
  - Still likely contain a certain amount of placeholder assets
  - (Continued next slide)

Alpha Definition

- Feature complete
- “Localization” begins
- Focus test
- Play testing
- Marketing continues

Based on notes from Neal Robison, ATI
Alpha: Crash Bandicoot (1 of 2)

Alpha: Crash Bandicoot (2 of 2)

(Crash Bandicoot)
Game Development Timeline (5 of 5)

- Level design
  - create the levels for the game
  - duration: 4 months
  - people: project leader, 3 level designers
  - result: finished game with all levels, in-game tutorials, manuals

- Review
  - testing the code, the gameplay, and the levels
  - duration: 3 months (partially overlapping level design)
  - people: 4 testers
  - result: the gold master

Other Development Milestones: Beta Definition

- At Beta stage, a game should:
  - Have all content complete
  - Be tested thoroughly for bugs and gameplay tweaks
  - Be shown to press for preview features
  - (Continued next slide)
Stages of Development: Beta

- Polish, polish, polish
- Game balancing
- Localization continues
- Demo versions

Based on notes from Neal Robison, ATI

Other Development Milestones: Gold Master Definition

- At Gold Master stage, a game should:
  - Be sent to the platform holder/s (where applicable) for TRC testing
  - Be sent to press for review
  - Be sent to duplication for production
  - Be backed up and stored
  - (Continued next slide)

Based on notes from Mark Overmars
Final/GMC/Gold

- The Game is “Done”
  - Testing, testing, testing
  - Intense pressure
  - Submit to console developers
  - Manufacturing timing

Post-Mortem

- Analysis of PR, marketing
- Analysis of production, source Code
- What went right, what went wrong
- Archive all assets
- Kick-off the Sequel!

Based on notes from Neal Robison, ATI
Outline

• What is a Game?
• Genres
• The Game Industry
• Game Timeline
• Team Sizes (next)

Development Team Size

• As late as the mid-80’s teams as small as one person.
• Today, teams today ranging from 10-60 people.
• Programming now a proportionally smaller part of any project
• Artistic content creation proportionally larger
• See Gamasutra, (www.gamasutra.com)
  - Search for "post mortem"
  - Game data at bottom includes team size and composition
Development Team 1988

- Sublogic's JET (early flight sim)
  - Sublogic later made scenery files for Microsoft flight simulator
- 3 Programmers
- 1 Part-Time Artist
- 1 Tester

Total: 5

Development Team 1995

- Interplay's Descent
  - Used 3d polygon engine, not 2d sprites
- 6 Programmers
- 1 Artist
- 2 Level Designers
- 1 Sound Designer
- Off-site Musicians

Total: 11
Development Team 2002

- THQ's *AlterEcho*
- 1 Executive Producer
- 1 Producer
- 4 Programmers
- 2 Game Designers
- 1 Writer
- 3 Level Designers
- 3 Character Modelers and Animators
- 1 2d and Texture Artist
- 1 Audio Designer
- 1 Cinematic Animator
- 1 QA Lead and Testers

Total: 19+

Development Teams for Online Games

- Star Wars online (2003?)
- Development team: 44 people
  - 50% Artists
  - 25% Designers
  - 25% Programmers
- 3 Producers
- “Live” Team (starting at Beta, 6 months before done)
  - 8 Developers
  - 50-60 Customer support (for 200K users)
  - 1000 Volunteer staff (for 200K users)
A (Larger) Developer Company Today

• Designing and creating computer games is serious business
  - Large budgets ($1 million+)
  - Large number of people involved
  - Large risk

• Wisdom
  - Use modern software development techniques
  - Keep creativity where it belongs
    * In the design
    * Not during the programming
