IMGD 1001:
Gameplay

by
Mark Claypool (claypool@cs.wpi.edu)
Robert W. Lindeman (gogo@wpi.edu)

Outline

☐ Gameplay   (next)
☐ Game Balance
☐ Level Design

1

Gameplay

- Player experiences during the interaction with game systems
- Collective strategies to reach end points (score, goal)
- Specific to game activities
- "What the player does"
- Includes
  - *Utility* - A measure of desire associated with an outcome
  - *Payoffs* - The utility value for a given outcome
  - *Preference* - The bias of players towards utility

Gameplay Example (1 of 2)

- Adventure game: *Knight* and *Priest*
- During combat
  - Knight in front with sword
  - Priest in back casts spells (all spells cost the same)
    - E-bolts (do damage equal to sword)
    - Band-aids (heal equal to sword)
- Fight a single opponent with sword
- Which spell should Priest cast?
  - Against 1 big opponent with 6 arms?
    - e-bolts
  - Against 30 small opponents with weak attacks?
    - band-aids
  - → Can always decide which is better (not interesting!)
- → How can we fix this?

Group Exercise

☐ Break into project groups

☐ Adventure game: *Knight* and *Priest*

☐ Add gameplay elements that make *combat* more interesting than in previous choice

☐ Discuss

☐ What are the categories?

Gameplay Example (2 of 2)

☐ Now, suppose…
  ■ Band-aids still affect single target but e-bolts have an area affect
  ■ E-bolts do less damage, but armor doesn't make a difference

☐ Now, which spell should Priest cast?
  ■ Answer isn't as easy. Interesting choices. Good gameplay.

> "A game is a series of interesting choices."
> - Sid Meier (*Pirates*, *Civilization*…)

3

Implementing Gameplay (1 of 2)

WPI

- ☐ Choices must be non-trivial, with *upside* and *downside*
  - ■ If only upside, AI should take care of it
  - ■ If only downside, no-one will ever use it
- ☐ Note, this is only regarding Game Theory
  - ■ Ex: Could have ray gun that plays music. "Cool", but soon "gimme the BFG"
  - ■ Ex: Nintendo's *Smash Bro's* has "Taunt"
    - ☐ What for?
  - ■ Other examples from popular games?
- ☐ Gameplay value when upside and downside *and* payoff depends upon other factors
  - ■ Ex: Rohan horsemen, but what if other player recruits pikemen?
  - ■ Ex: Bazooka, but what if other player gets out of tank?

Implementing Gameplay (2 of 2)

WPI

- ☐ Should be *series* of interesting choices
  - ■ Use of health potion now may depend upon whether have net for capturing more fairies
  - ■ Having net may depend upon whether needed space for more arrows for bow
  - ■ Needing arrows may depend upon whether killed all flying zombie bats yet
- ☐ Hence, well designed game should require *strategy*
  - ■ Note, even *Tetris* and *PacMan* have strategy!
- ☐ Game must display *complexity*
  - ■ But doesn't mean it must be complex!
    - ☐ Don't make too many rules ("less is more")
    - ☐ How many rules does chess have?
  - ■ *Emergence* from interaction of rules
    - ☐ Ex: In *Populous*, Priests convert, but not if already in combat. By design? Maybe, but non-intuitive result.
The Dominant Strategy Problem

- Articles with "10 killer tactics" or "ultimate weapon"
  - What are these doing?
  - → Taking advantage of flaws in the game design!
- Should never have an option that is so good, it is never worth doing anything else
  - *Dominant* strategy
- Should never have an option not worth using
  - *Dominated* strategy

Near Dominance

- Worth looking for near dominance, too
  - *Near-dominated* – useful in only very narrow circumstance
  - *Near-dominant* – used most of the time
- Ex: *stun gun* only useful against raptors, so only useful on raptor level (near dominated)
  - Do I want it used more often?
  - How much effort on this feature?
  - Should I put in lots of special effects?
- Ex: *flurry of blows* most useful attack (near dominant) by Monk in D&D
  - Should we spend extra time for effects?

Avoid Trivial Choices

Cavalry

Lancers ← Archers

- ☐ Cavalry → Archers → Lancers
  - ■ *Transitive,* not so interesting
- ☐ Better (see right)
  - ■ Cavalry fast, get to archers quickly with lances
  - ■ Lancers spears hurt cavalry bad
  - ■ Lancers slow, so archers wail on them from afar
- ☐ What game does this look like?
  - ■ rock-paper-scissors

→ *Intransitive*, more interesting

Toolbox of Interesting Choices

- ☐ Strategic versus Tactical
- ☐ Supporting Investments
- ☐ Compensating Factors
  - ■ Impermanence
- ☐ Shadow Costs
- ☐ Synergies

Strategic versus Tactical (1 of 2)

- Strategic choices affect course of game over medium or long term
  - *Tactical* choices apply right *now*
  - Ex: build archers or swordsmen (strategic)
  - Ex: send archers or swordsmen to defend against invading force (tactical)
- Strategic choices have effect on tactical choices later
  - Ex: if don't build archers, can't use tactically later

Strategic versus Tactical (2 of 2)

- Ex: *StarCraft*
  - Strategic choice: 1) upgrade range of marines, 2) upgrade damage, or 3) research faster fire
  - Which to choose?
    - If armored foes, Protoss Zealot, more damage
    - If fast foes, Zerglings, maybe faster fire
  - Other factors: number of marines, terrain, on offense or defense

Supporting Investments

- ☐ Often game has primary goal (ex: beat enemy) but secondary goals (ex: build farms for resources)
- ☐ Some expenditures directly impact primary goal (ex: hire soldier), while others indirect (ex: build farm) called *supporting investments*
- ☐ Primary goals are "one-removed"
  - ■ Ex: improve weapons, build extra barracks
- ☐ Supporting goals are "two-removed"
  - ■ Ex: build smithy can then improve weapons
  - ■ Ex: research construction lets you build smithy and build barracks (two and three removed)
    - ☐ Most interesting since strategic
- ☐ Payoff will depend upon what opponents do

Versatility (1 of 2)

- ☐ For balance, a guideline is to ask what is best and worst about choices:
  - 1) This move does most damage, but slowest
  - 2) This move is fastest, but makes defenseless
  - 3) This move best defense, but little damage
- ☐ Most should be best in some way
- ☐ With versatility, a 4th choice:
  - 4) This is neither best nor worst, but most versatile
- ☐ Versatile good for
  - ■ beginners
  - ■ flexibility (against unpredictable or expert opponent)

Versatility (2 of 2)

- ☐ Ex: beam can mine asteroids and shoot enemies
  - ■ Versatility makes it good choice

- ☐ Speed is common way for versatility
  - ■ Don't make fast units best at something else

- ☐ If a versatile unit is also cheapest and most powerful → no interesting choice
  - ■ (See "Compensating Factors", next)

Compensating Factors

- ☐ Consider strategy game where all units are impeded by some terrain
  - ■ Ships can't go on land, tanks can't cross water, camel riders only in dessert
- ☐ Flying unit that can go anywhere
  - ■ How can we balance this?
  - 1) Make slow
  - 2) Make weak, easily destroyed
  - 3) Make low surveillance range (unrealistic)
  - 4) Make expensive
     Common but uninteresting since doesn't change tactical use!
- ☐ Versatility, neither best nor worst
  - ■ good for beginners
  - ■ Flexible, so often more powerful
  - ■ Speed makes units versatile

Impermanence (1 of 2)

WPI

- Some things are permanent
  - Ex: you get a health pack
- Others are not
  - Ex: I got the "one ring" but you can grab it off me
- Really, another kind of compensating factor
  - i.e., impermanence can compensate for something being really good
  - a common and valuable technique
- Can be used for interesting choices
  - Ex: choice of "medium armor for rest of level" or "invulnerable for 30 seconds"?
- Advantage (or disadvantages) can be impermanent in number of ways.
  - How?

Impermanence (2 of 2)

WPI

- Examples (mostly from *Magic the Gathering – Battlegrounds*)
  - Can be destroyed (enchantments, ex: *gratuitous violence* makes units tough, but can be destroyed)
  - Can be stolen or converted (ex: *threaten* steals or converts enemy for short time)
  - Can be applied to something you don't always have (ex: *goblin king* gives bonus to goblins, but must have goblins)
  - Certain number of uses (ex: three grenades, but grenade spamming)
  - Last for some time (wears off, ex: Mario *invulnerable star*)

Shadow Costs (1 of 2)

WPI

- In a game, you are continually presented with cost/benefit trade-offs
- But not always directly
  - Ex: soldiers for gold, but need armory first for weapons and barracks for soldiers
  - Called *shadow costs* for supporting investments
  - And shadow costs can vary, adding subtlety

Shadow Costs (2 of 2)

WPI

- Ex: Age of Mythology has wood and food. Food is inexhaustible, wood is finite
  - Charioteer 60 wood, 40 food and 40 seconds
    - Shadow costs vary over game
      - Early on, food and wood expensive, spawn doesn't matter (since make few)
      - Mid-game, much food and wood, spawn makes it harder to pump out new units
      - End-game, no wood, spawn is priceless
- Use variability to add subtlety to game
- Vary environment and vary shadow costs
- Ex: more trees to vary cost of wood
  - Challenge for level designer
  - Expert players will appreciate

Synergies (1 of 2)

Synergies are interaction between different elements of player's strategies (note, terms may be different than Ch 2.2)

☐ Positive Feedback
- Economies of Scale – the more of one type, the better (ex: wizards draw strength from each other)
- Economies of Scope – the more of a set, the better, or advantage of combined arms (ex: trident and net, infantry and tanks)

☐ Negative Feedback
- Diseconomies of scale – first is most useful, others have less benefit (ex: diminishing returns from more peasants entering a mine since get in each other's way)
- Diseconomies of scope – (ex: mixed troops go only as fast as slowest)

Synergies (2 of 2)

☐ Ideally, all go together at once, but can emphasize
- Ex: Chess is a game of positive feedback
- Small advantage early on, exploited to crushing advantage

☐ Game of negative feedback needs other ways to keep interesting
- Ex: trench combat makes a "catch-up" factor, or get as far from base, supply grows long, game lasts a long time
- Ex: *Super NES NBA Jam* – catch up setting as an equalizer

☐ Be aware of both negative and positive feedback

Group Exercise

- ☐ Break into groups
- ☐ Consider a new game
  - ■ Player enters college during first year
  - ■ Goal is to graduate from college
- ☐ Choose 1-2 tools from your toolbox below
  - ■ Strategic versus Tactical
  - ■ Supporting Investments
  - ■ Compensating Factors
    - ☐ Impermanence
  - ■ Shadow Costs
  - ■ Synergies
- ☐ *First* choose tool, *then* consider gameplay to make interesting
- ☐ Discuss!
