CS525T
the Internet of Things
Course Objectives
Course Objectives

- To introduce the **current vision** of the Internet of Things and its impact on the world.
- To provide in-depth coverage of three or four IoT research areas (**a limited breath goal**).
- To understand the challenges that must be overcome before IoT can be deployed.
- To provide an appreciation for the standardization of IoT protocols that is necessary for IoT to become reality.
 Course Objectives

To prepare students to conduct research by refining the following research skills:

- To develop literature searching and literature review techniques.
- To analyze and evaluate published results.
- To improve oral and written communications skills.
- To appreciate IoT performance evaluation and privacy issues.
