

Draw the heap that would result after adding 9 to the given heap H1

H1:

New root

ST1

ST2

ST3

5

12

42

9

5

12

Merge(ST2, ST3)

Merge(ST2, ST3)

New root

ST1

ST2

ST3

9

empty

empty

42

9

42

How to test that the answer returned is a valid answer?

- Is it a heap?
- Does the result contain all the elements from the original heap (the same number of occurrences)
- The new element has been added
- No elements in result that weren't in original

AVL Trees

A binary search tree where, for each node in the tree, the heights of the left and right subtrees differ by at most 1

0 – perfectly balanced

-1 – more on left

+1 – more on right

addElt(5)

single rotation

First rotation: rotation on child of pivot

Second rotation: rotation on pivot itself
